DETAILED ACTION

Election/Restrictions

Claims 1-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected claim, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 5/2/05.

Applicant's election with traverse of claims 20-22 in the reply filed on 5/2/05 is acknowledged. The traversal is on the ground(s) that the search would not be burdensome. This is not found persuasive because the varying scope of the claims would require a separate search.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Ikeda et al

(148).

Art Unit: 2813

20. (Previously Presented) A semiconductor integrated circuit device comprising: a plurality of static random access memory (SRAM) cells, each having a pair of n-channel drive metal insulator semiconductor field effect transistors (MISFETS), a pair of p-channel load MISFETS and a pair of n-channel selection MISFETS (Abs., lines: 1-5 and $Q_{1,2,s1,s2}$) wherein the n-channel drive MISFETS and n-channel selection MISFETS contain a lightly doped drain (LDD) structure (Col.5, lines: 40-50), respectively, and wherein the p-channel load MISFETS contain a single drain structure, respectively (Fig.6 (10) and Col.9, lines: 25-30).

21. (Previously Presented) A semiconductor integrated circuit device according to claim 20, wherein each one of the n-channel drive MISFETS is coupled with one of the p-channel MISFETS to form an inverter circuit (Col.4, lines: 1-10).

22. (New) A semiconductor integrated circuit device according to claim 20, wherein each of drain regions of the n-channel drive MISFETS and n-channel selection MISFETS is comprised of a first region and a second region, the first region has an impurity concentration of dopant greater than that of the second region, and each of the second regions of the n-channel drive MISFETS and n-channel selection MISFETS is disposed nearer to each of gate electrodes of the n-channel drive MISFETS and n-channels selection MISFETS than is the first region (Col.5, lines: 40-65).
